1. Who can use our script and for what kind of business is it practical

The purpose of this document is to help you understand our script and how we can improve your business. Due to its flexible and modular architecture, the script can be used for different affairs based on a hourly renting process. Our script is addressed to those who rent restaurants but it also can be used for other products such as boats, cars etc.

2. What do we offer

We offer you a simple solution which allows you to administrate your business in an efficient manner. The main functionalities of the script are listed below.

2.1. Hourly booking calendar

The WebRestaurants script can be used for different affairs based on hourly renting. The availability calendar displays the hourly availability for each room and table.

Image 1 – Hourly availability calendar

2.2. Adding and managing restaurants

For each restaurant the administrator can add an unlimited number of images, define the restaurant's menu (images, price, category, multilanguage description), define the hours of operation and the restaurant's description.

The restaurants can be displayed using different templates (fully editable). Also, the description fields are fully customizable from the admin area .

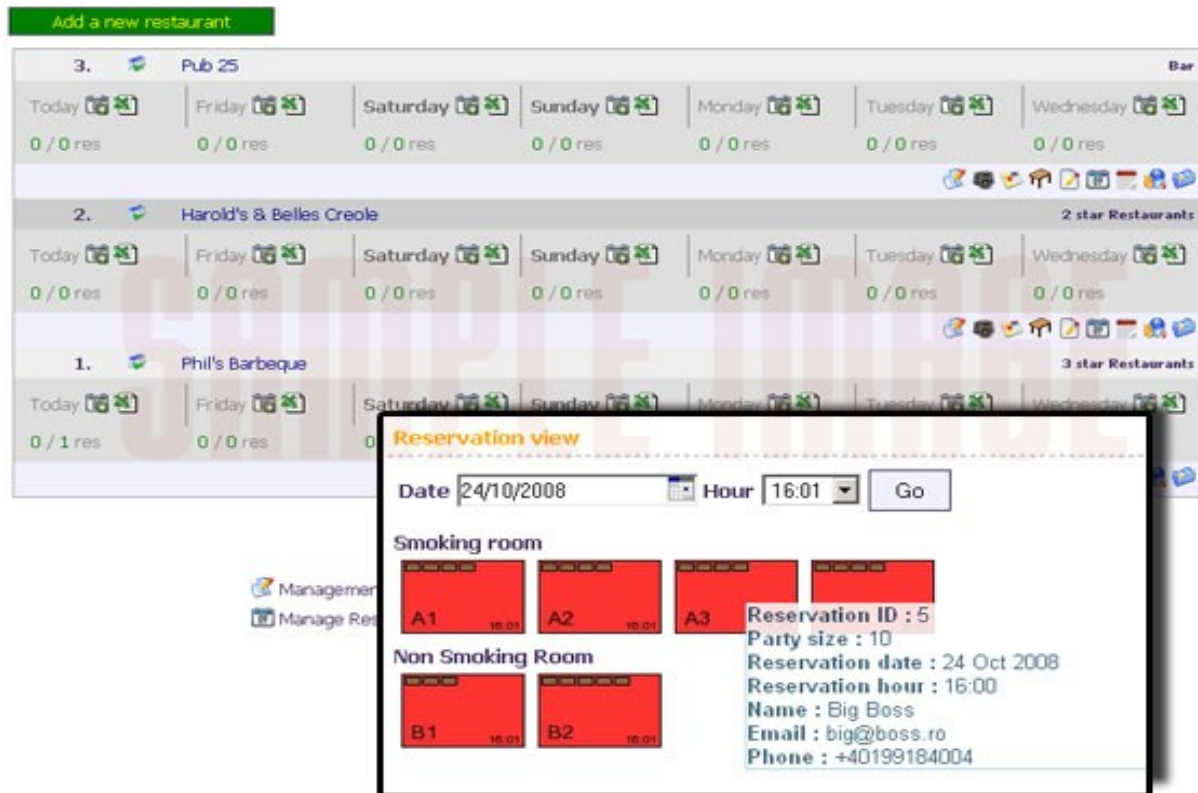

Image 2 – Restaurant Management Page

2.3. Reservations management system

The reservations management system allows the administrator a maximum of flexibility in handling the booking procedures: approve, decline, modify, delete bookings. Also, statistics regarding the daily bookings can be exported using .csv files.

2.4. Custom links and CMS

The CMS integrated into the script allows the administrator to define his own custom pages. The site menu can also be modified, the system allowing to define submenu links as well.

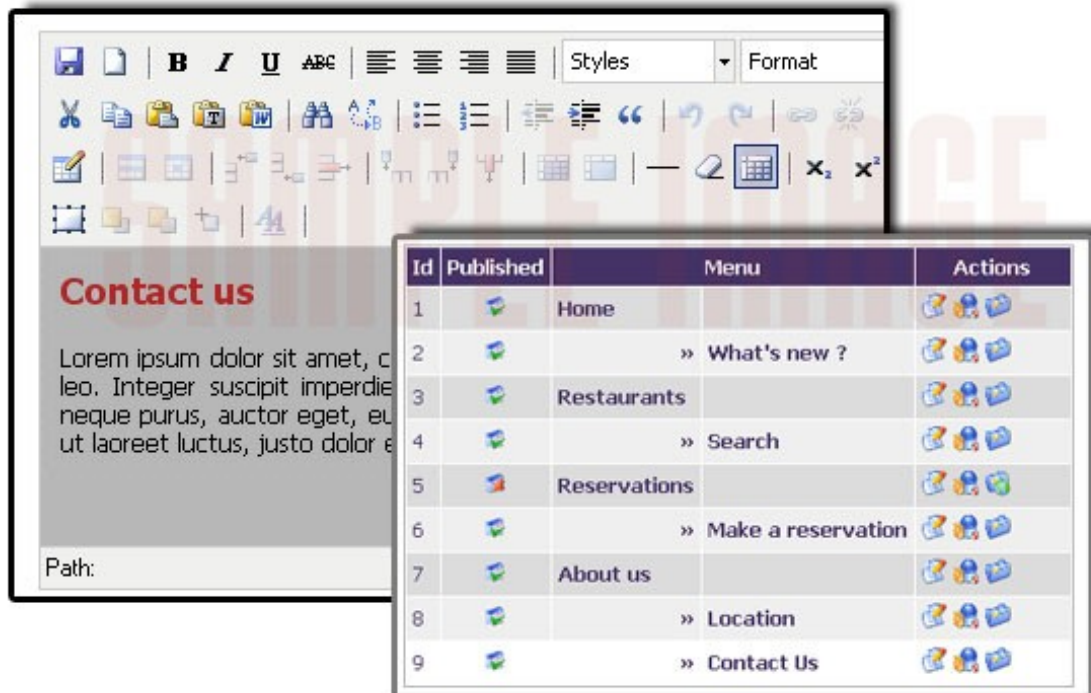

Image 3 – Custom links and CMS

2.5 General settings and features

The administrator has access to a large number of features related to the system configuration: templates, languages, watermark/Google map configuration, email settings.

Multiple languages can be activated, for each one of them being possible to define the charset to use.

3. Conclusions

We offer an excellent solution for those who want to improve their business and manage it in order to obtain best results. The script is easy to use and the main functionalities allow you to develop a successful business.

3.2 Installing the script

The server technical requirements are:

- PHP 5. or higher¹, MySQL 5.0
- Zend Optimizer and GD library
- PHP safe_mode = on (recommended)
- PHP register_globals = off (recommended)

3.2 Buying the script

The license can be used for an unlimited period of time only on the domain mentioned on the order form. The license change is free or charge and can be done only on the client's request.

During one year since the WRU Package order date, you benefit of free Support and Upgrades Services. After the free period expiry you benefit of the Support and Upgrades Services only in return of a yearly tax of \$60. The license purchase and use is not conditioned by the Support and Upgrades Services purchase.

The script is encoded using Ioncube Encoder in order to avoid alteration and unauthorized use of the source code. Therefore, the source code cannot be modified. If you need to adapt the script or to customize it in order to fit your needs, this will represent additional costs.

Our Customer Support Center helps you answer to the possible questions regarding the script. You have the possibility to submit a help desk ticket to request support from our staff, chat live with a representative or search our knowledge base for additional information.
